GROUNDING IN STRENGTH

Allow our broad range of cost-effective customizable products to bring value to your next project.

At Forterra we take pride in our ability to provide the concrete industry with innovative solutions. Putting the quality and efficiency of precast construction and installation to work for our clients is one of the many ways we do that.

The growing demand for underground utilities and telecommunication cables prompts an increased demand for precast concrete vaults and manholes to effectively pull and splice for many applications. Often these structures are placed under roadways and runways that require stringent load designs, unique geometry and specific sizes.

The Forterra Advantage

Forterra's precast services afford the following advantages:

- Our engineers customize designs, so your end product is **tailored** to your needs.
- Fabrication is controlled in reinforcement, resulting in high levels of dimensional **accuracy**.
- Products are ready for **immediate use** and/or backfill, expediting your installation process.
- Fabrication practices take place in a plant environment for **cost-effectiveness**.
- The weather risk associated with fieldcast material is eliminated, **controlling costs**.
- Our quality control is extensively documented for **maximum efficiency**.

The Shape of Value

By combining the efficiency of pre-cast and the advantage of customized design, we bring you specialty vault services a step ahead of traditional concrete companies. Allow our broad range of cost-effective customizable products to bring value to your next project.

In addition to electrical and communication needs, other pre-cast specialty vault offerings include:

- airports
- power plants
- railroad industry
- renewable energy market
- potable water utilities
- wastewater treatment systems
